

CONTACT

- +60-179701529
- lok.jing.lau.80@gmail.com
- Kuala Lumpur, Malaysia
- linkedin.com/in/laulj80
- github.com/laulj

SKILLS

- Javascript/ Typescript (vite & pnpm)
- tanstack/node-cache
- SQL
- AI Copilot
- Nodejs/Django
- Python
- Solidity/Smart Contract Audit

LANGUAGES

- English (Native)
- Mandarin (Fluent)
- Malay (Beginner)
- Cantonese (Basic)

INTEREST

- Blockchain Security
 - Competitive Audit (Sherlock, Hackenproof)
- Artificial Intelligence

LOK JING LAU

JUNIOR DEVELOPER

SUMMARY

A full-stack developer with concrete experience in AI model training and data analysis. Combines a highly logical engineering background with a systems-thinking approach to solve complex data, automation, and operational optimization problems.

EXPERIENCES

Software Development

Jun 2024 - Present

Self-employed, Kuala Lumpur, MY

- Architected and built a cross-exchanges quantitative strategy (Node.js, TypeScript, React) that monitors, parses, and analyzes real-time price discrepancies across massive data feeds from multiple exchanges.
- Developed a React data visualization dashboard for real-time operational performance monitoring, data tracking, and structural trend analysis.
- Integrated REST APIs and WebSocket feeds from exchanges and node providers; handled cross-chain token bridging, balance querying, and transaction submission using ethers.js.
- Hosting a dedicated blockchain node to remove rate limiting, reducing on-chain query latency to 100ms.
- Scaled the strategy to \$30,000 in annual revenue within the first 12 months.

Frontend Developer

Mar 2023 - Jul 2023

Efeng Spine Healing Center, Shah Alam, MY

- Designed a minimalist frontend with Ant Design and developed it using React per client request.
- Coordinated the second revision to upgrade the website from single-page to React Router.

EDUCATIONS

Solidity Smart Contract Developer

09/2025 - 04/2026

Cyfrin Updraft
Completed

CS50's Web programming with Python and JavaScript

10/2022 - 04/2023

HarvardX
Completed

Bachelor of Electrical and Electronics Engineering

09/2017 - 06/2022

Tunku Abdul Rahman University of Management and Technology, Kuala Lumpur, MY
GPA: 3.65 / 4.0

PROJECT

Decentralised Stablecoin, DUSD

02/2026 - 03/2026

- Designed a minimalist stablecoin with over-collateralization and liquidation mechanisms.
- Implemented a liquidation function that preserves protocol logic under market volatility.
- Wrote edge case unit, fuzz, and invariant tests for under-collateralised condition, achieved 93%+ on Forge coverage.

React Web - Efeng Spine

03/2023 - 07/2023

- Efeng spine is a simplistic frontend designed with Ant Design and developed using React per client request.
- The objective is to act as a medium of information to aid client in promoting their business.
- Deployed at [<https://efengspine.com>]

Running Log

01/2023 - 04/2023

- Running Log is a web app designed to help runners tabulate and visualize all their training data including lap distance and duration.
- The frontend utilizes React to display charts, tables, calendars, and other useful information to users. The backend utilizes Django and SQLite to store users' data.
- Deployed at [<https://runninglog-app.onrender.com>].

CS50 Web Final Project - Portfolio

01/2023 - 06/2023

- A cryptocurrency portfolio platform designed to help traders and investors track their assets accurately by providing statistical information.
- Integrated CoinGecko and Binance APIs for price fetching.
- Deployed at [<https://cs50-portfolio.onrender.com>].

CERTIFICATE

Smart Contract Security

06/2026

A Cyfrin Updraft course on Smart Contract Audit that involves Static Analysis, Invariant Tests, and POC writing through Foundry framework.

Solidity Smart Contract Development

07/2025

A Cyfrin Updraft course on smart contract development

edX Verified Certificate for CS50's Introduction to Computer Science

04/2023

A computer science course offered by HarvardX, an online learning initiative of Harvard University.

PUBLICATION

IEEE

07/2024

- Designed, developed, and published a computer vision system for Automated Container Code Recognition (ACCR)
- Independently curated and preprocessed the complete dataset, and utilized TensorFlow for end-to-end model training with a focus on real-time feasibility, achieving a final accuracy of 89.20%
- Evaluated non-deterministic system behaviors, mapping edge cases, and systematic logic verification.
